Abstract

PURPOSE: To obtain a plaster for medical use, capable of maintaining the pharmacological effect by keeping the blood concentration over a long period and giving little irritation to the skin even after the application to the skin for a long time owing to the proper moisture-permeability of the plaster.
CONSTITUTION: This plaster for medical use having a moisture-permeability of $50-1,000 \text{ g/m}^2 \cdot 24 \text{ hr}$ is produced by coating a surface of a substrate with a tacky adhesive base composed of 100 pts.wt. of a tacky adhesive exhibiting pressure-sensitive adhesivity at normal temperature and 0.5-20 pts.wt. of a guanabenz(salt) and/or a guanfacine(salt).
